

THE ANTARCTIC FOOD WEB

The ocean around Antarctica has a rich and stable food web, which has stayed the same for thousands of years.

Study the diagram carefully, and answer the following questions:

1. What does a Baleen Whale eat?
2. Which animals eat krill?
3. Squid eat three 'kinds' of zooplankton. What are they?
4. Which animals like to eat fish?
5. Are Sperm Whales at the top of their food chain, or the bottom? What else is in their food chain?
6. Study this food chain:
